

Cynet vs. CrowdStrike

Cynet delivers complete protection in one unified, AI-powered platform.

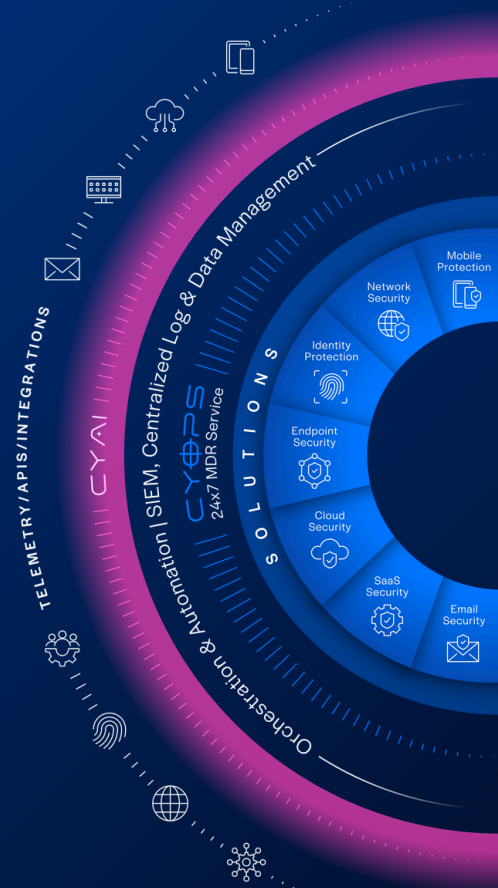

The Challenge

Managing cybersecurity shouldn't feel like managing chaos. When every location and resource uses different tools, you end up with:

- Gaps in visibility
- Slower response to threats
- Higher costs and operational complexity
- Juggling multiple tools that don't communicate with each other

The Smart Choice is Cynet

Cynet provides a unified, fully-managed security solution that's predictable in cost, faster to deploy, and built for organizations looking to minimize ongoing tuning, configuration changes, complex scripting, and the burden of maintaining multiple point products.

Why Organizations Choose Cynet over CrowdStrike

Cynet

- ✓ **Coverage**
Cynet protects endpoints, users, cloud, identity, email, and network, in a single, unified platform.
- ✓ **Detection & Prevention**
Cynet achieved 100% detection, 100% prevention, zero false positives, and 100% technique-level coverage in the 2025 MITRE ATT&CK Evaluations with no tuning required.
- ✓ **Automation & Response**
Automated detection, containment, and remediation in seconds via built-in SOAR and 24x7 CyOps MDR.
- ✓ **Ease of Use**
Single agent, single dashboard, easy to deploy and manage. Designed for MSPs and security teams.
- ✓ **Cost Predictability**
Flat, transparent per endpoint, per-month pricing. No add-on fees.
- ✓ **Deployment**
Fully operational within hours of deploying.

CrowdStrike

- ✗ **Coverage**
Focuses on endpoint detection and charges for other protections separately.
- ✗ **Detection & Prevention**
CrowdStrike achieved 100% Detection, 100% Protection, and zero false positives for the Falcon platform in the 2025 MITRE ATT&CK Evaluations.
- ✗ **Automation & Response**
Multiple modules and dashboards to manage, making ease of use impossible.
- ✗ **Ease of Use**
Offers OverWatch/Complete at an added cost.
- ✗ **Cost Predictability**
Offers add-ons at an additional cost for each feature or module which can add up quickly.
- ✗ **Deployment**
Can take weeks to months to configure and tune.

The Cynet Advantage

Detect and Block advanced threats across endpoints, users, identities, network, email, mobile, and cloud.

Investigate and Respond with 24x7 CyOps MDR, and ProActive CyOps including guided or executed remediation.

Enhanced Protection with complete visibility across an entire customer environment, including endpoints, users, email, cloud and network.

Less Noise via CyAI powers automated threat detection, with fewer false positives, shifting focus from alert noise to meaningful action.

Protect Today, Grow Tomorrow with complete, customizable protection today with the platform designed to evolve as threats and customer needs change.

Standardized Pricing and Delivery with predictable per-endpoint, per-month pricing.

Execute Rapid Containment with ProActive CyOps pre-authorized actions to isolate hosts, disable AD and Microsoft 365 users.

Support Flexible MSP Service Models with All-in-One, Elite and Protect tiers designed for scalable protection and broad attack-surface coverage.

Operational Efficiency with one platform replaces multiple point tools, enabling MSPs to standardize security delivery, streamline operations, and reduce day-to-day overhead.

Peace of Mind with CyOps MDR security experts operate around the clock to detect and respond to threats, delivering confidence that environments are protected around the clock.

Faster ROI with security that saves time and control costs, allowing MSPs to redirect effort toward growth and innovation of their business.

Trusted Results (MITRE 2025)

100% Protection

100% Detection Visibility

100% Technique Coverage

Zero False Positive Detections
