

# Cynet vs. SentinelOne

**Cynet delivers complete protection**  
in one unified, AI-powered platform.

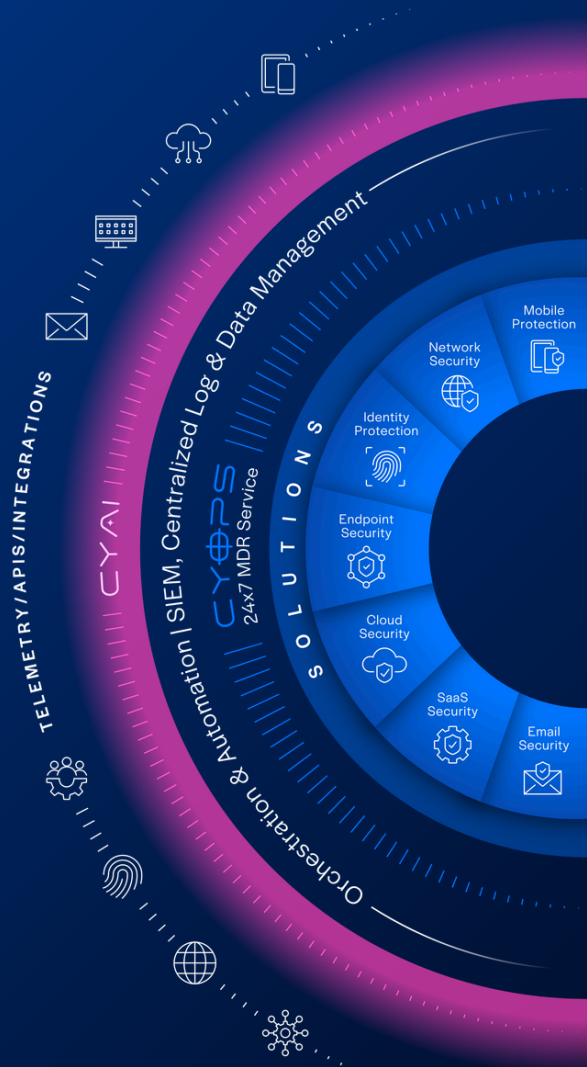

## The Challenge

Managing cybersecurity shouldn't feel like managing chaos. When every location and resource uses different tools, you end up with:

- Gaps in visibility
- Slower response to threats
- Higher costs and operational complexity
- Juggling multiple tools that don't communicate with each other

## The Smart Choice is Cynet

Cynet provides a unified, fully-managed security solution that's predictable in cost, faster to deploy, and built for organizations looking to minimize ongoing tuning, configuration changes, complex scripting, and the burden of maintaining multiple point products.

## Why Organizations Choose Cynet over SentinelOne

### Cynet

- ✓ **Coverage**  
Cynet protects endpoints, users, cloud, identity, email, and network, in a single, unified platform.
- ✓ **Detection & Prevention**  
Cynet achieved 100% detection, 100% prevention, in the 2025 MITRE Evaluations - no tuning required.
- ✓ **Automation & Response**  
Automated detection, containment, and remediation in seconds via built-in SOAR and CyOps MDR.
- ✓ **Ease of Use**  
Single agent, single dashboard, easy to deploy and manage. Designed for MSPs and lean teams.
- ✓ **Cost Predictability**  
Flat, transparent per endpoint, per-month pricing. No add-on fees.
- ✓ **Deployment**  
Fully operations within hours of deploying.

### SentinelOne

- ✗ **Coverage**  
Relies heavily on add-ons, third-party integrations, and paid MDR tiers (e.g., Vigilance Pro, etc.).
- ✗ **Detection & Prevention**  
Did not participate in the 2025 MITRE Evaluations, which introduced expanded and more rigorous testing scenarios.
- ✗ **Automation & Response**  
Manual alert triage and limited automation without Vigilance MDR or SOAR add-ons and added cost.
- ✗ **Ease of Use**  
Fragmented console experience with separate configuration paths for EDR, identity, Cloud, and MDR tiers.
- ✗ **Cost Predictability**  
Tiered licensing (Core, Control, Complete, Vigilance, etc.) that adds up quickly.
- ✗ **Deployment**  
Requires multiple modules and policies to achieve full coverage.

## The Cynet Advantage

**Detect and Block** advanced threats across endpoints, users, identities, network, email, mobile, and cloud.

**Execute Rapid Containment** with ProActive CyOps pre-authorized actions to isolate hosts, disable AD and Microsoft 365 users.

**Investigate and Respond** with 24x7 CyOps MDR, including guided or executed remediation.

**All-in-One and Elite** tiers provide tailored protection with our unified, AI-powered platform, 24x7 MDR, and broad attack surface coverage.

**Pricing and Packaging** with predictable per-endpoint, per-month pricing.

**Collaborative Service Options** with CyOps 24x7 MDR, and ProActive CyOps with pre-authorized containment actions.

## Stronger Security Outcomes

**Enhanced Protection**  
Complete visibility across an entire environment, and every location.

**Peace of Mind**  
CyOps MDR security experts operate around the clock to detect and respond to threats.

**Less Complexity**  
One platform replaces multiple point tools.

**Faster ROI**  
Simplified security that saves time, money, and resources.

**Less Noise**  
CyAI powers automated threat detection, with fewer false positives, shifting focus from alert noise to meaningful action.

**Protect Today, Grow Tomorrow**  
Complete, customizable protection today with the platform to adapt to tomorrow's threats.

### Trusted Results (MITRE 2025)

- ✓ 100% Protection
- ✓ 100% Technique Coverage
- ✓ 100% Detection Visibility
- ✓ Zero False Positive Detections
